

YUNUS EMRE ÇELİKKIRAN

Istanbul, Turkey | +90 531 860 9857 | yunusemrecelikkirann@gmail.com

GitHub: github.com/yunuse1 | LinkedIn: linkedin.com/in/yunus-emre-çelikkiran-797547169

PROFESSIONAL SUMMARY

Software Engineer with experience in backend engineering, REST API design, and automated data processing. Experienced in building backend services using Python, Spring Boot, Kotlin, PostgreSQL, and SQL-based systems. Contributed to production fintech applications, automation pipelines, testing processes, and structured document processing. Interested in AI-powered applications, data pipelines, and scalable microservices.

TECHNICAL SKILLS

Python, SQL, Kotlin, Java | FastAPI, REST APIs, Spring Boot | PostgreSQL, MySQL | Unit & Integration Testing, Docker | Git, Postman | Web Scraping, Data Processing | Object-Oriented Programming, Data Structures & Algorithms

EXPERIENCE

FLYRANK AI (Remote)

Backend AI Engineering Intern (08/2026 – Present)

- **Backend & API Development:** Designing and building RESTful API endpoints and backend workflows using Python and PostgreSQL to support data-driven applications.
- **Data Processing & Automation:** Developing data parsing routines, payload validation logic, and SQL storage structures for automated processing tasks.
- **System Testing & QA:** Writing unit and integration test scripts using Postman and Python testing frameworks to verify API response reliability and error handling.

VALENSAS (Istanbul, Turkey)

Software Developer (09/2023 – 04/2024) | Software Developer Intern (03/2023 – 09/2023)

- Developed backend services using Spring Boot, Kotlin, and PostgreSQL, building and integrating RESTful APIs to support core financial transaction features for enterprise applications.
- Contributed to fintech projects including IstePay and Bitronit, improving API endpoint response structure and data validation.
- Developed Python automation and PDF data extraction tools, converting unstructured documents into clean relational database entries to streamline internal operations.
- Participated in testing, debugging, database operations, and SQL optimization, writing unit/integration tests and refining database queries to ensure API reliability.

PROJECTS

PDF Data Extraction Tool - Python-based extraction and processing of structured PDF data into JSON and PostgreSQL formats for automated workflow integration.

Backend API Projects - RESTful microservices built with Spring Boot, Kotlin, and PostgreSQL, implementing robust input validation and error handling (400/404 status codes).

Web Scraping & Data Processing - Python automation tools for collecting, parsing, and transforming web data into normalized SQL structures.

EDUCATION

Istinye University - B.Sc. Computer Engineering (Expected Graduation: 2028)

Çanakkale Onsekiz Mart University - Computer Programming (2023)

LANGUAGES

Turkish: Native | English: Professional Working Proficiency (B2)
